NEW SOUTH WALES.

AUSTRALIAN MUSEUM.

(REPORT FROM TRUSTEES FOR 1878.)

Presented to Parliament, pursuant to Act 17 Vict. No. 2, sec. 9.

REPORT OF THE TRUSTEES OF THE AUSTRALIAN MUSEUM, FOR THE YEAR ENDING
31st DECEMBER, 1878.

To HIS EXCELLENCY THE GOVERNOR-IN-CHIEF,—

1. The Trustees of the Australian Museum have the honor to submit to your Excellency this their Twenty-fifth Annual Report.

2. The Museum has been open to the public continuously throughout the year, and the total number of persons who have visited it have been 96,830. In April the Honorable the Minister for Justice and Public Instruction transmitted to the Trustees a copy of a resolution passed by the Legislative Assembly, affirming that it was desirable that the Museum should be opened for the admission of the public on Sunday afternoons. Mr. Leary also communicated the expression of his desire that the resolution should be carried into effect as soon as possible, and intimated that he approved of the necessary expenditure being incurred. Parliament appropriated the sum of £200 for the purpose, and arrangements were accordingly made, by which on the first Sunday of the ensuing month, without infringing upon the liberty of the attendants to be present at Divine Service, the Museum was prepared for the reception of visitors. The number of persons who have attended on Sundays has been 36,071, or an average of 1,030 visitors for each afternoon. On many occasions the building has been inconveniently crowded, but the conduct of visitors has been decorous and orderly.

3. By the addition of £100 per annum to the amount of the supplementary endowment, Parliament has enabled the Trustees to open the Museum at 10 o'clock a.m. instead of noon, which is the usual hour of opening most Museums of a similar character throughout the world. In order to maintain the collections in a good state of preservation, the Trustees have had imposed upon them the necessity of closing the Museum on one day in each week to permit of the systematic examination and renovation of the specimens, and Monday has been selected as the most convenient. The Trustees have likewise had under consideration the propriety of extending the hours of admission until 10 o'clock at night. The Curator reported that artificial light would be very injurious, if not destructive, to the specimens, and for that reason, as well as on the ground of expense, the proposal was held to be inadmissible.

4. Upon the return of their collector from New Guinea, the Trustees obtained a valuable addition to their types of New Guinea fauna. An opportunity offered at an early period of the year to fit out an expedition for the exploration of the Baxter River, and for the probable acquisition of ethnological and other specimens from that part of New Guinea—a country to which the attention of Australian communities, and persons who are interested in natural science in other parts of the globe, has been much directed. The Museum had profited nothing by Signor D'Albertis' expeditions, but with the co-operation of Captain Pennefather, and the willingness of the Government to lend the steam launch "Neva," the Trustees anticipated that they would be able to acquire important collections for a comparatively small outlay, while at the same time their operations would be conducted in a manner calculated to impress the natives with feelings of friendship, justice, and benevolence. When, however, they were on the point of completing their arrangements, Captain Pennefather, who was to have acted as the leader of the expedition, had the misfortune to bring himself within the operation of the quarantine laws, and to suffer so long a detention that it was not possible to carry out the expedition at the season of the year within which alone Europeans can hope to enjoy health on the low-lying shores of New Guinea. The proposed expedition had thus to be abandoned. Since then, however, the Trustees have succeeded in obtaining collections of birds, mammals, and ethnological specimens from Mr. Broadbent, Mr. Goldie, and others who have spent some time in New Guinea. The Trustees have also been able to acquire by purchase and exchange numerous specimens of the natural history of New Zealand and Fiji, in which the Museum was deficient. They have at the same time neglected no opportunity of obtaining new and duplicate specimens of the fauna of Australia, these being always valuable for exchange with kindred institutions. One of their collectors is now at work in North Australia, and arrangements have been made for sending another to Tasmania.

5. In response to the invitation of the New South Wales Commissioners for the Paris Exhibition, the Trustees prepared a collection of Australian birds, mammals, and minerals. The presence of Professor Liversidge at the Exhibition will enable them to exchange these specimens for others which the Museum does not possess, so that the Trustees hope their co-operation will have contributed not only to the interest of the New South Wales portion of the Exhibition, but will also have been the means of enhancing the attractiveness

Crown Trustee.
